

Homework 1 – Evaluating Expressions

- Complete the table of inputs and outputs for the following code:

Note: various solutions may exist for the final two.

```
a = int(input('Enter a number: '))

if a % 2 == 0:
    a //= 2
else:
    a -= 0b1010
if a < 0:
    b = -a
elif a == 0:
    b = 0o101
else:
    b = a**2
print(a%b + b*a if b >= a else a//b + (a-b))
```

input	output
1	
2	
4	
5	
10	
15	
-9	
	-121
	0

Homework 2 – Amount Due, Pt. 2

- Extend the program you wrote last week for the problem **Amount Due** to give the user the ability to do all of the following:
 - Calculate taxes on the purchase or not
 - And input the tax rate
 - Allow the purchaser to use a credit or debit card
 - Then charge a 3% convenience fee if so
- When complete, output the total on screen
